

Gflash server modpack V.2

This modpack was made by Alex811 (owner and sysadmin of [Gflash](#)), for the main Gflash modded Minecraft server. If you want to share it, I would appreciate it if you used this link:
<http://www.gflash.eu/modpacks>.

Installation

Just extract the contents of this zip in your Minecraft root folder (by default in Windows that is: %appdata%/.minecraft/) more details @ <http://www.gflash.eu/modpacks>

Update

Already have the modpack but you need to manually update it?
Just delete the folder “mods” in your Minecraft root directory and then extract the contents of this zip in your MC directory, make sure to replace everything!

Please note

- Any bug reports being made directly to mod authors should state that you're using mods that change the game's algorithms (like BetterFPS).
- Some of the mods might be gathering anonymous data about your installation and your usage of the mod and sending it to the authors. If you'd like to disable that, you may do so from the mods' configuration files or in-game settings.
- Although I may have made small contributions to some of the mods listed, I'm not their author (unless otherwise explicitly stated), I've just gathered the mod files and made sure they work together, mostly by changing their configuration files. For more information about the mods, refer to the linked websites.
- The mods are not listed in a particular order.
- If a license is referred to using a file name instead of a link, it means it's included in the mod's jar file.

Mod list and permissions
